PROFILE

As an experienced Fullstack Developer, I specialize in crafting seamless digital experiences by leveraging SvelteKit for frontend development and Django for backend operations. My unique blend of creativity and technical proficiency enables me to build dynamic web applications that prioritize user-friendliness and efficiency. Through collaborative efforts, I ensure that projects not only meet but exceed client expectations, delivering solutions that are both innovative and practical.

WORK EXPERIENCE

Fortesys Sdn BhdInternship
2021-2022Working as an intern in a networking company in puchong (NOC Department)

Work Description
Responsible for maintaining the clients device status in the network operation center.
Responsible for managing and hardening clients personal devices by installing required software such as bit locker.
Responsible for maintaining the usability of devices installed on different sites.

Array Hubs Sdn Bhd
2023 - 2024. Working as a Frontend Developer using Sveltekit and building interactive web apps for client.

Work Description
Work closely with a senior developer to build a web app that is user friendly, good UX and UI, responsive and fail safe from scratch using Sveltekit. We also work closely with designers to aid in designing the entire application UI on every aspect such as animation and so on. Other than that, we also collaborate with our backend team to discuss and implement the necessary building blocks for our frontend application to work flawlessly.
